 **schmidt**
a brand of aebi schmidt

Benefit from:

- Everything can be operated from the driver's cab
- No physical exertion for the driver
- Ergonomically shaped handle and armrest for fatigue-free working, armrest can be individually adjusted in all directions, all control elements can be reached with one hand on the joystick

Simple and convenient

with the Swingo 200⁺ SKR

Quick and easy working with top-quality technology is the objective with the new option for cleaning gullies for the Schmidt Swingo 200⁺. The SKR 550 and SKR 700 systems, which are available in cooperation with Allroundmaster, enable gullies to be cleaned by just one single worker. This saves costs and conserves resources. From the comfortable driver's cab of the Schmidt Swingo 200⁺, gullies are cleaned using a flushing and suction tube which is telescopic. Leaves, sand, gravel and other kinds of dirt are sucked up through the suction tube and collected in the machine's 2 m³ hopper.

The driver is not exposed to the weather conditions and does not have to perform any heavy lifting. The electrohydraulic operation and the entirely mechanised cleaning process guarantees rapid and efficient cleaning and a high level of daily coverage. It is possible to clean well over 500 gullies per day. The water which is used for rinsing in the cleaning process is collected again, freed of dirt and then reused. This means that the water does not need to be topped up even when the machine is deployed for a lengthy period of time.

With a top speed of 50 km/h, the versatile carrier vehicle can operate over a large range. The delicately balanced, infinitely variable drive enables precise and easy working. Inside the driver's cab, a height-adjustable and articulating steering column including a tilt function ensures a comfortable position – even for larger drivers. Ergonomically designed operating controls and a fully air-conditioned cabin guarantee a relaxed working environment. The driver controls operations manually using a joystick.

Innovative technology from Allroundmaster and the tried-and-tested Schmidt Swingo 200⁺ are the perfect combination when it comes to cleaning gullies. The system is available in two versions. As a fixed attachment or with switchable attachment.

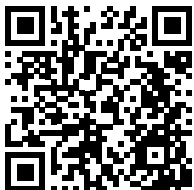

Swingo 200⁺ SKR

Gullie cleaning

Your advantages

- Gullies can be cleaned by just one worker
- Save costs and conserve resources
- Everything can be operated from the driver's cab
- No physical exertion for the driver
- High daily capacity (over 500 gullies per day)
- The rinsing water is picked up and treated, considerable reduction in the need to refill fresh water even on long daily deployments
- Low wear and tear and maintenance costs thanks to lubricant-free sliding system
- The Swingo can be used in an interchangeable system as a fully functioning sweeper, uncompromising performance
- High flexibility of the carrier vehicle thanks to quick-change system (interchangeable attachment system)
- Ergonomically shaped handle and armrest for fatigue-free working, armrest can be individually adjusted in all directions, all control elements can be reached with one hand on the joystick
- Proportional lateral displacement 550/700
- High suction power even at low speeds, which means it is possible to work with low noise while at the same time guaranteeing a perfect cleaning result
